

ERV8

Redefining Comfort and Efficiency

ERV8(Combinable series)

HP	8-20	22-28	30-38
Single Unit			
Combined Unit			

Note: Four unit combinations are possible for 8-26 HP models. For four unit combinations please contact Eminent.

Original communication bus chip greatly simplifies installation and saves installation costs.

Benefits

Flexible installation

Low installation cost

High reliability

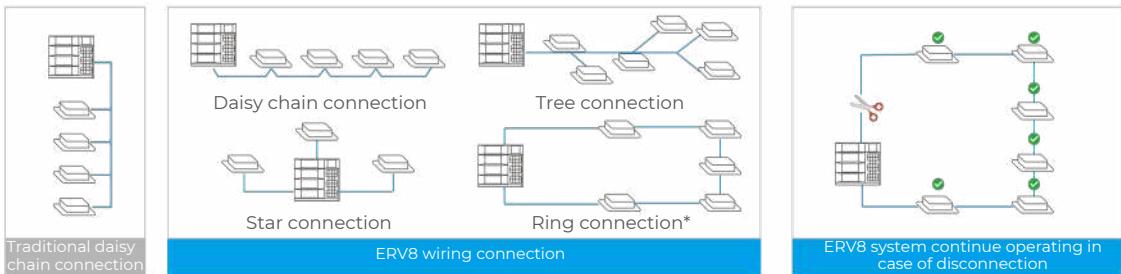

Stable operation

HyperLink communication technology supports any wiring pattern rather than just daisy chain connection, reducing installation costs and the possibility of an incorrect connection. It has stronger anti-interference ability, achieving a communication distance of up to 2000m.

Arbitrary Topology Communication

In addition to the traditional daisy chain connection, the communication wire supports tree connection, star connection, ring connection and so on. The wiring is flexible, which greatly reduces installation costs and has no possibility of wrong connection on site.

*In ring connection, the communication wire must be connected polarized (M1 port to M1 port and M2 port to M2 port).

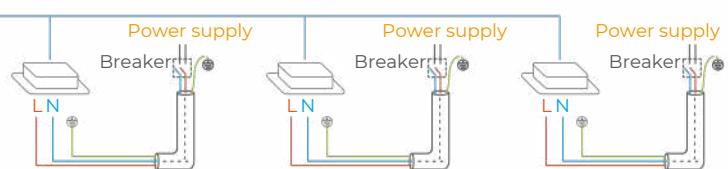

Super Anti-interference Capability

Special waveform restoration technology enhances anti-interference performance for more stable communication.

Flexible Power Supply for Indoor Units

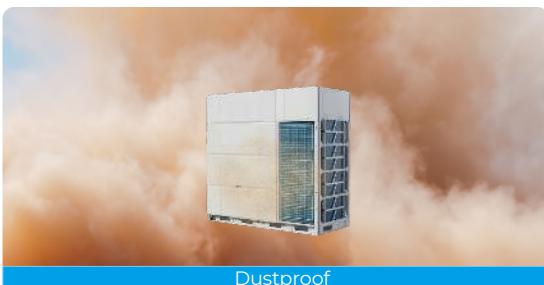

HyperLink's unique communication method allows the indoor units to be powered not only by a uniform power supply, but also by individual and zone power supplies, making it particularly suitable for each shop in a large complex building, which can independently power on and off its own indoor units.

IP55 fully enclosed electric control box provides all-round protection for internal electronic components, greatly improving system **RELIABILITY**.

Anti-corrosion

Dustproof

Rain & Weatherproof

Insect proof

Benefits

High reliability

Stable operation

■ IP (INGRESS PROTECTION)

IP **Dustproof grade code**
Prevent entry foreign objects and dust

55 **Waterproof grade code**
Prevent water spray in all directions

Fully enclosed electronic components are isolated from the external environment to protect against corrosion, sand, humidity, snowstorms and other harsh conditions, and prevent small animals and insects from entering the chamber. This protects internal electronic devices and improves the overall environmental tolerance.

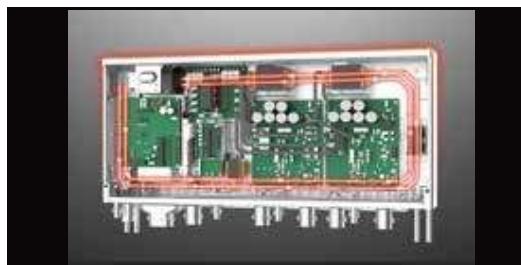

All Microchannel Refrigerant Cooling

All electronic components including inverter module, filter module and power module are cooled by specially designed microchannel refrigerant to ensure that the electronic components work in the best temperature range.

PTC Heater

The unique PTC heater, with precise temperature control sensor, can still ensure that the temperature inside the chamber remains within the normal operating temperature range of electronic devices even in the low-temperature environment of -30°C.

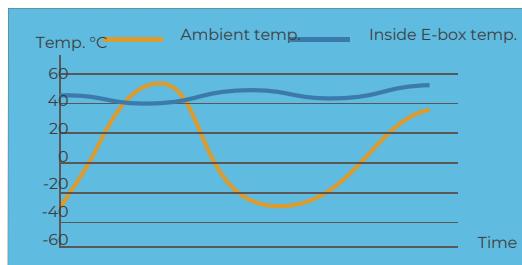

Built-in Circulating Fan

The built-in circulating fan accelerates the air flow inside the chamber, and the heat exchange is more sufficient to ensure the consistent ambient temperature inside the chamber.

5 High Precision Temperature Sensors

5 high precision temperature sensors are used to accurately monitor the operation state of electronic control under various conditions to ensure that the internal temperature of the chamber is always kept within a stable range.

The status of the refrigerant can be determined throughout the process, ensuring high RELIABILITY and COMFORT.

Benefits

High reliability

Stable operation

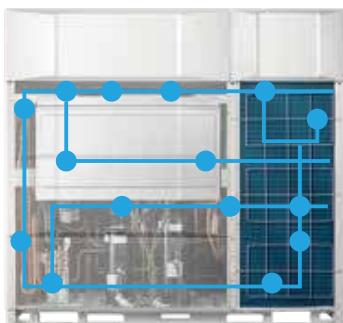

Enhanced comfort

Up to 19 sensors are distributed throughout the refrigerant system, and the status of the refrigerant can be determined throughout the process, ensuring stable operation. At the same time, combined with the digital twin technology of the refrigerant system, a virtual sensor can be created in the event of a physical sensor failure, so that the system does not shut down in the event of a sensor failure, ensuring comfort.

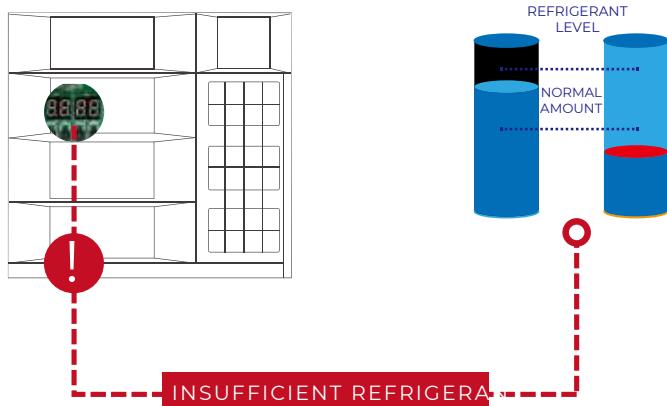

Complete Sensors

The ERV8 Series VRF features the industry's most comprehensive range of 19 condition sensors with built-in data models for compressors, heat exchangers, throttling components and more. By analyzing sensor data in real time, it can sense the status of the refrigerant anywhere in the system.

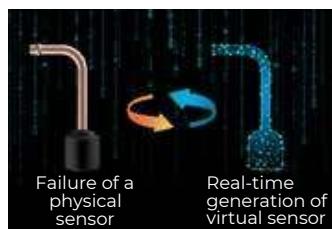

Refrigerant Amount Diagnosis

Thanks to the complete sensors, the refrigerant running state is clearly visible, so as to accurately diagnose the amount of refrigerant.

Virtual Sensor Backup

In the event of a sensor failure, other sensors can automatically simulate a virtual backup sensor, so that the VRF system can continue to operate without stopping.

ERV8 ETA

ETA is the abbreviation of Evaporating Temperature Alteration. Further upgraded ETA technology to maximize **ENERGY SAVING**.

Benefits

Energy saving

Enhanced comfort

Fast cooling/heating

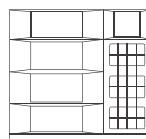

Built-in professional operation and maintenance algorithm, so that the annual operation energy efficiency of each set of systems is increased by more than 28%.

Variable Refrigerant Flow

STEP 1: Architectural space feature recognition

The indoor unit automatically recognizes the size of the building space and the effectiveness of the insulation according to the rate of temperature drop.

Refrigerant flow coordination

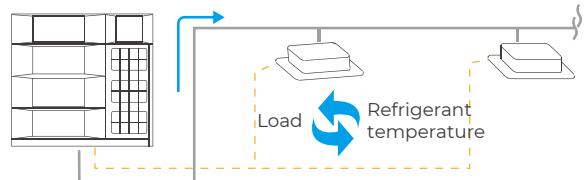

Automatic calculation of the building load and the required refrigerant quantity based on the sensor parameters.

Variable Refrigerant Temperature

STEP 2: System refrigerant temperature determination

The system automatically matches the evaporating temperature (in cooling) or condensing temperature (in heating) to the room load to maximize comfort and energy efficiency.

Automatic matching of the corresponding refrigerant temperature to the load.

Variable Indoor Airflow

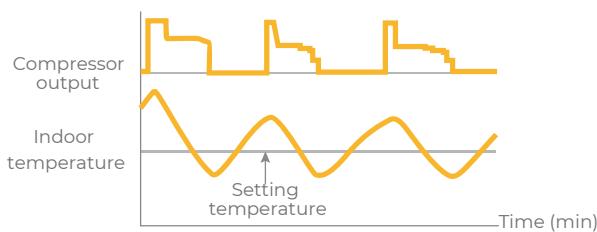

STEP 3: Adaptive indoor airflow and refrigerant flow

Each indoor unit automatically adjusts the corresponding indoor airflow and refrigerant flow according to the evaporating/condensing temperature, enabling precise temperature control.

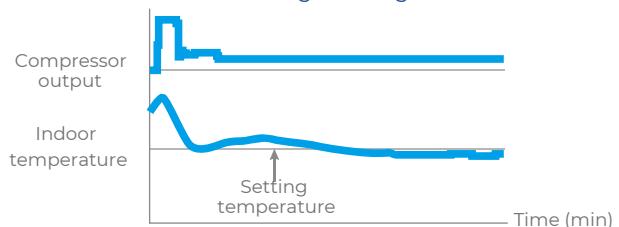

Automatic matching of the corresponding indoor airflow to the load and refrigerant temperature.

Conventional refrigerant regulation

ERV8 refrigerant regulation

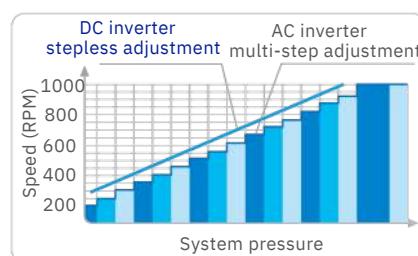

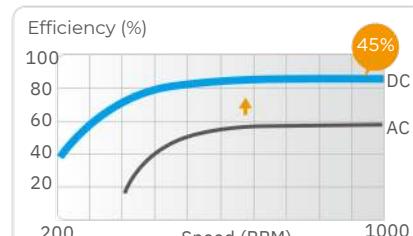

High Efficiency

Full DC Inverter Technology

Full DC Inverter for Outdoor Components

The ERV8 Series VRF uses full DC inverter compressor and fan motor to achieve high precision stepless speed adjustment according to system operation, and ensures that the system is always in optimum condition, operating more efficiently, more consistently and with less noise.

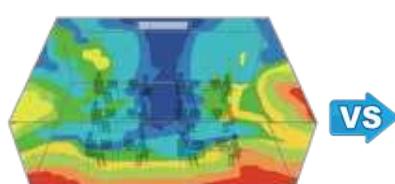

- Wider frequency adjustment range
- Faster cooling and heating
- Higher energy efficiency

All power devices such as indoor fan motor, drain pump and electric control board are fully DC, which increases electrical efficiency by 20% and results in more accurate temperature control, a more constant indoor temperature and higher energy efficiency.

Full DC Inverter for Indoor Components

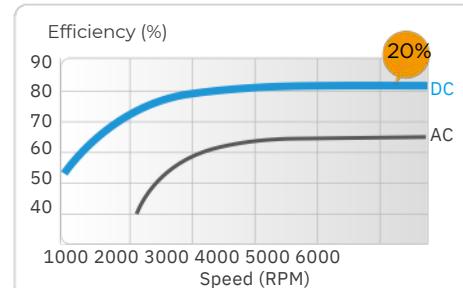

20%
Efficiency
improvements

Uneven temperature distribution

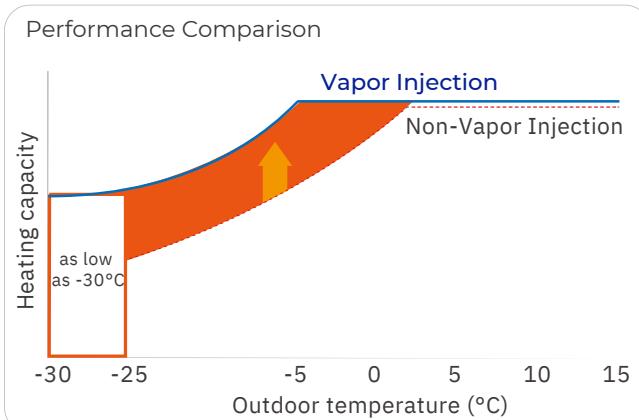

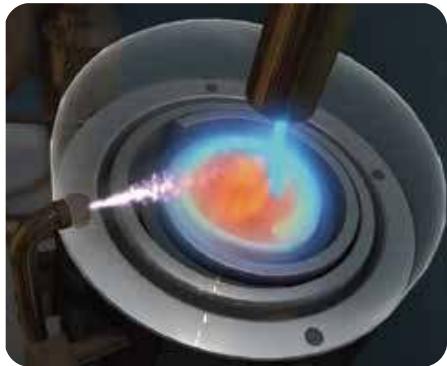

Uniform temperature distribution

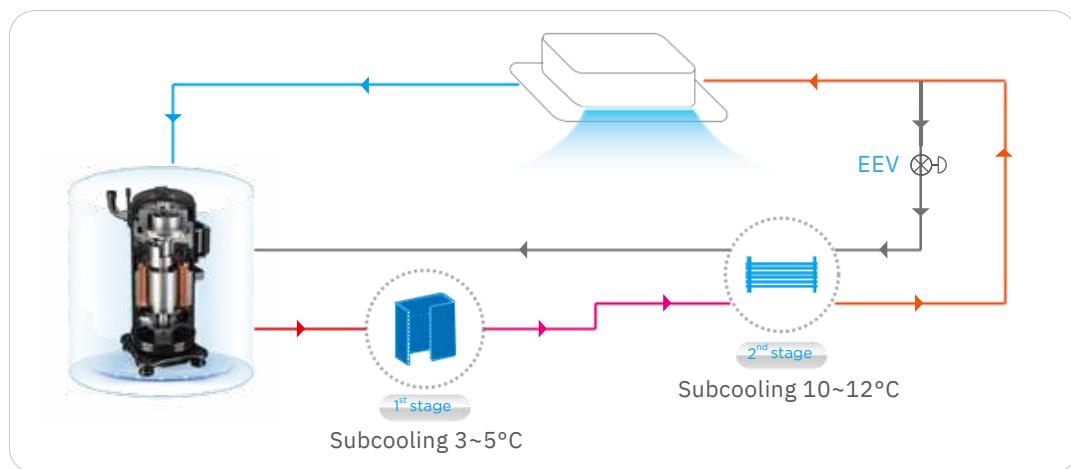

Enhanced Vapor Injection (EVI) Compressor

The enhanced vapor injection DC inverter compressor increases refrigerant circulation and improves both cooling and heating capacity.

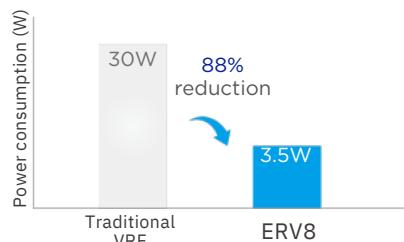

Advanced Subcooling Technology

The ERV8 Series VRF uses a micro-channel heat exchanger to further cool the refrigerant and the refrigerant system can achieve 15°C refrigerant subcooling, which can further improve the refrigerant heat transfer efficiency while reducing the sound of refrigerant flow.

Low Standby Power Consumption

Compared to the standby power consumption of traditional VRF of about 30W, the ERV8 Series VRF uses optimized control scheme to further reduce standby power consumption to as low as 3.5W.

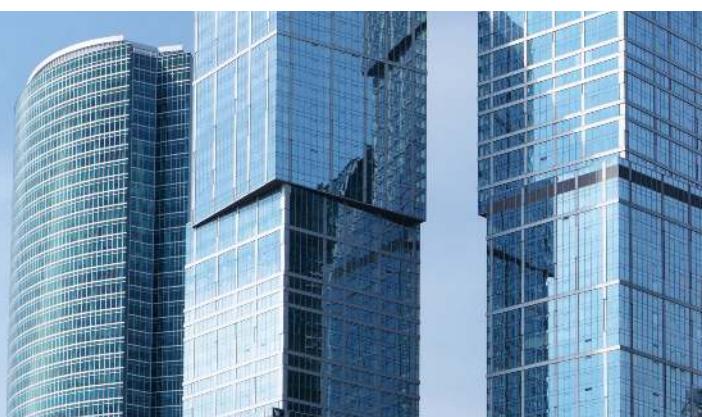

60-step Energy Management

For projects with temporary electricity supply restrictions, the outdoor unit supports 60-step energy management which can be set to output 40-100% capacity in 1% increments. It prevents tripping during conditions of restricted electricity supply and allows the system to continue to operate.

High Reliability

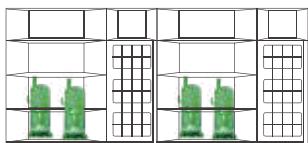

■ Quadruple Backup

In two fans, two compressors and multiple units, one can run in backup for another. Additionally, the ERV8 series VRF generates a corresponding virtual sensor for each physical sensor by means of a digital algorithm, which serves as a backup for each other, ensuring no shutdown in the event of a fault, and further guaranteeing comfort.

1 Unit Backup

In a multi-unit system, the different units act as a backup to each other, ensuring that the system can continue to operate if one unit fails.

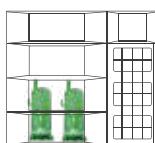

Intelligent load-bearing between units during normal operation

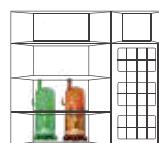

Continue operating in case of failure of one unit

3 Compressor Backup

In unit with two compressors, the two compressors act as a backup to each other, ensuring that the system can continue to operate if one compressor fails.

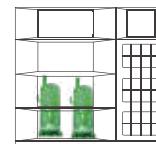

Intelligent load-bearing between compressors during normal operation

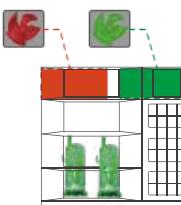

Continue operating in case of failure of one compressor

2 Fan Backup

In unit with two fans, the two fans act as a backup to each other, ensuring that the system can continue to operate if one fan fails.

In normal operation, each fan runs on demand

Automatic backup operation of another fan in case of failure of one fan

4 Sensor Backup

Through digital algorithms, each physical sensor generates a corresponding virtual sensor that acts as a backup to each other, ensuring that the failure of one sensor does not affect the normal operation of the system.

Automatic backup operation of the corresponding virtual sensor in case of failure of one physical sensor

Double Duty Cycling

1 Unit Duty Cycling

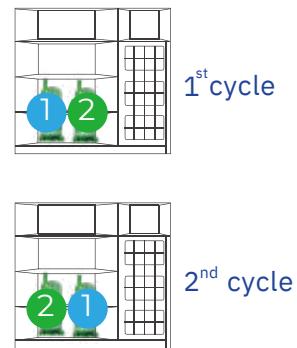

In a multi-unit system, duty cycling equalizes the running time of each outdoor unit, significantly extending unit lifespan.

Note: The duty cycling sequence shown in the figure is only a schematic reference. The actual duty cycling sequence is not a fixed sequence. Please refer to the technical manual for specific rotation rules.

2 Compressor Duty Cycling

In units with two compressors, duty cycling equalizes the running time of each compressor, significantly extending compressor lifespan.

Compressor start-up sequence

ShieldBox

IP55 fully enclosed electric control box provides all-round protection for internal electronic components, greatly improving system reliability.

Anti-corrosion

Dustproof

Rain & Weatherproof

Insect proof

SuperSense

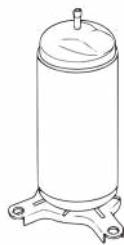

ERV8 Series VRF uses up to 19 sensors for each outdoor unit and 4 sensors for each indoor unit. The operating status of the system refrigerant is clearly visible, which can achieve intelligent analysis of operation parameters, intelligent error diagnosis and forecasting, and visualized energy saving.

Precise Oil Control

Four stages of oil control technology ensure all outdoor compressor oil is always kept at a safe level, eliminating any compressor oil shortage problems.

1

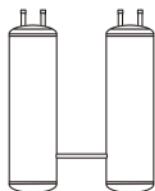

Compressor internal oil separation.

2

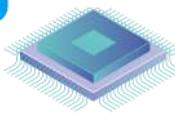

High-efficiency centrifugal oil separator (with separation efficiency of up to 99%) ensures that oil is separated from the discharge gas and returned to the compressors in a timely fashion.

3

Oil balance pipes between gas-liquid separator ensure even oil distribution to keep compressors running normally.

4

The automatic oil return program determines the oil return through the running time and the oil discharge amount, enabling precise oil return.

Heavy Anti-corrosion Protection*

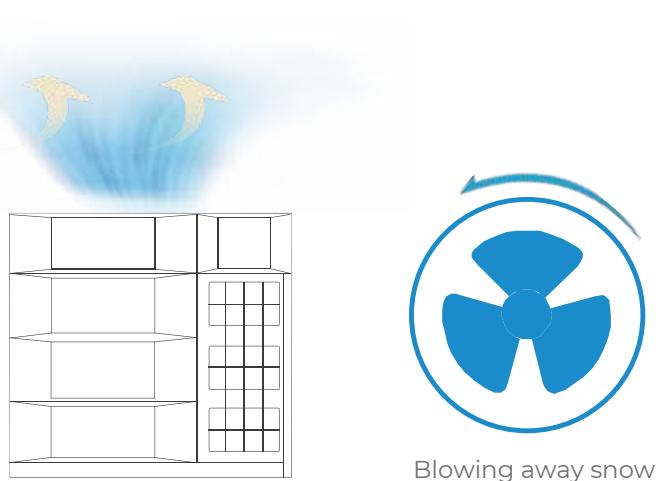

Standard outdoor units are given anti-corrosion treatment for non-extreme conditions and can also be customized with heavy anti-corrosion treatment on main components for surface protection against corrosive air, acid rain and saline air (for installations in coastal regions) to extend overall useful life. The integrity of the anti-corrosion treatment is ensured by subjecting major components and parts to salt mist testing, moisture and heating testing and light aging testing.

*Heavy anti-corrosion treatment is available as a customization option.

Auto Snow-blowing Function

The innovatively designed auto snow-blowing function enables the outdoor unit to prevent the accumulation of snow by itself.

Auto Dust-clean Function

The innovatively designed dust-clean function enables the outdoor unit to prevent the dust by itself.

Auto Dust-clean Function

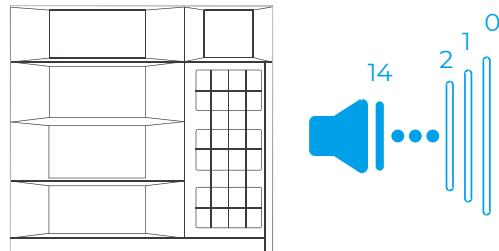

The innovatively designed dust-clean function enables the outdoor unit to prevent the dust by itself.

Enhanced Comfort

■ Advanced Silent Technology

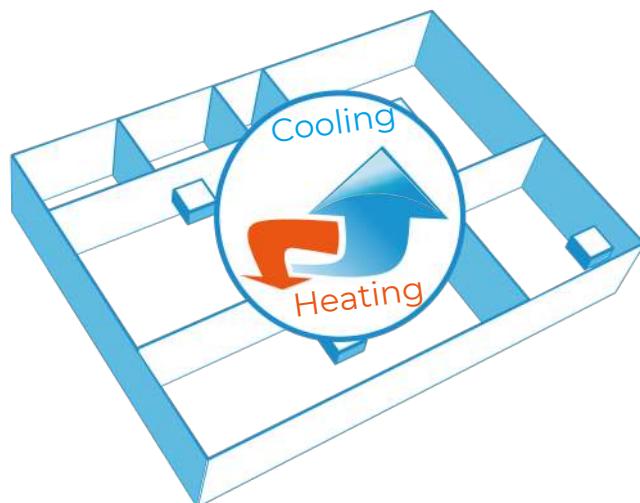

15-step silent mode provides more freedom and convenience to match the customer needs.

15 silent options

■ Auto Cooling-heating Changeover

Automatically selects cooling or heating mode to achieve the set temperature.

Enhanced Comfort

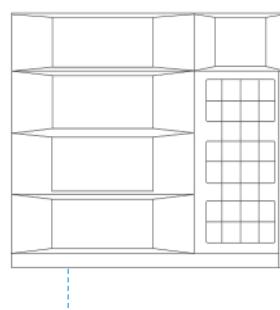

■ 10 Priority Modes

10 priority mode options provide more freedom and convenience to match the customer needs.

■ Additional Ambient Temperature Sensor*

The ERV8 Series VRF can be equipped with an additional external ambient temperature sensor to determine whether the system is operating in cooling or heating in auto priority mode. For some installations, the ambient temperature sensor fixed on the unit cannot detect the true ambient temperature, resulting in the system operating in an inappropriate mode and affecting indoor comfort. The external ambient temperature sensor can detect the true outdoor ambient temperature, and correctly judge whether the system is running in cooling or heating mode, ensuring indoor comfort.

Additional Ambient
Temperature Sensor

*This function is available as a customization option.

Wide Application Range

■ Wide Capacity Range

The ERV8 Series can be used as a single module or can be combined up to 3 modules, perfectly suited for small to large buildings.

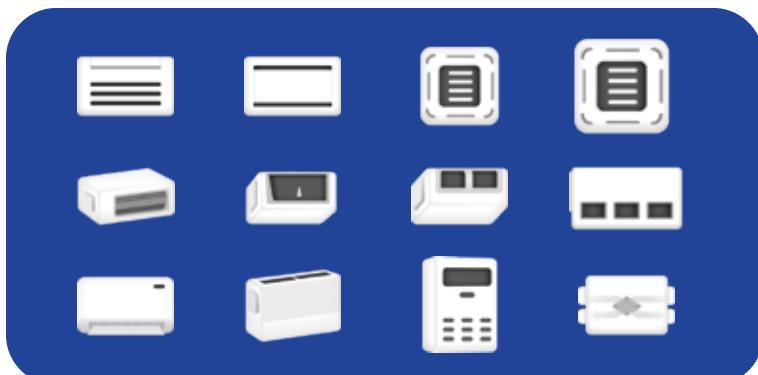

ERV8 - Combinable Series

Single unit	Single unit	Single unit
8-20HP	22-28HP	30-38HP
Combined unit	Combined unit	
40-76HP	78-114HP	

Note: Four unit combinations are possible for 8-26 HP models. For four unit combinations please contact Eminent.

■ Wide Range of Indoor Units

The ERV8 Series VRF offers types of over 100 models of indoor units to meet different scenarios of applications such as offices, shopping malls, hotels, airports, schools, hospitals, etc.

Wide Operation Range

Thanks to the EVI compressor and refrigerant cooling technology, the ERV8 Series VRF can operate at temperatures as low as -30°C for heating and up to 55°C for cooling.

Long Piping Capability

The ERV8 system can support a total piping length of up to 1100m, an installation height difference of up to 110m between indoor and outdoor units, and up to 40m between indoor units, making the ERV8 Series VRF adaptable to a wide range of building designs.

Total piping length: 1100m

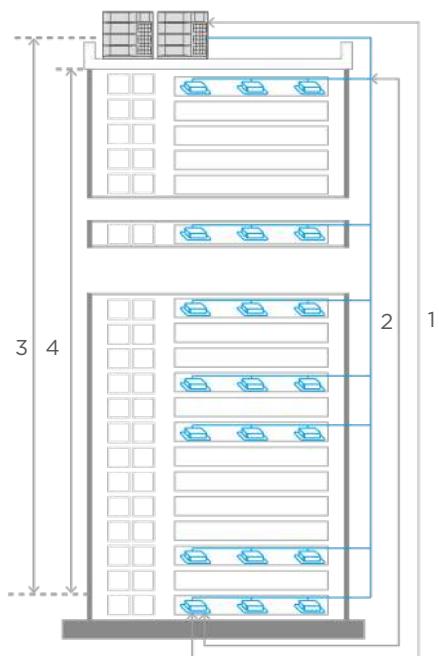

1 Longest piping length - actual (equivalent): 220(260)m

2 Longest piping length after first branch: 40/120*m

3 Level difference between IDUs and ODU - ODU above (below): 110(110)m

4 Level difference between IDUs: 40m

*The longest length after first branch is 40m as a standard but can be extended to up to 120m under certain conditions. Please contact your local dealer for further information.

Easy Installation and Service

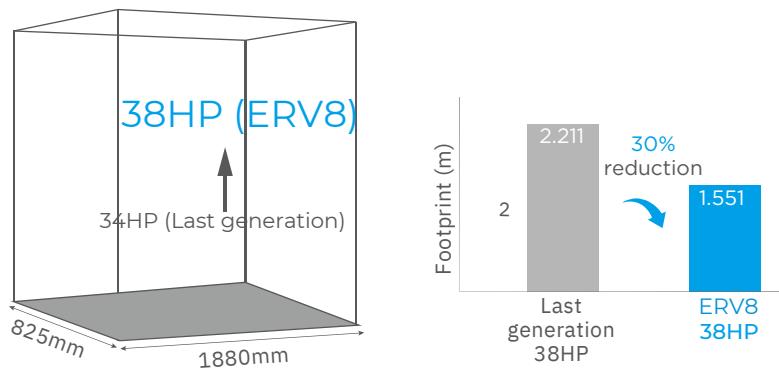

Free Wiring

HyperLink communication technology supports any wiring pattern rather than just daisy chain connection, reducing the installation cost and the possibility of incorrect connection. It has stronger anti-interference ability, achieving a communication distance of up to 2000m.

Space Saving

The ERV8 Series VRF has large capacity and small size, with a capacity of up to 38 HP in a single unit. A single unit can provide cooling/heating for a space of 400m². The space-saving advantages are particularly obvious for large projects.

Auto Addressing

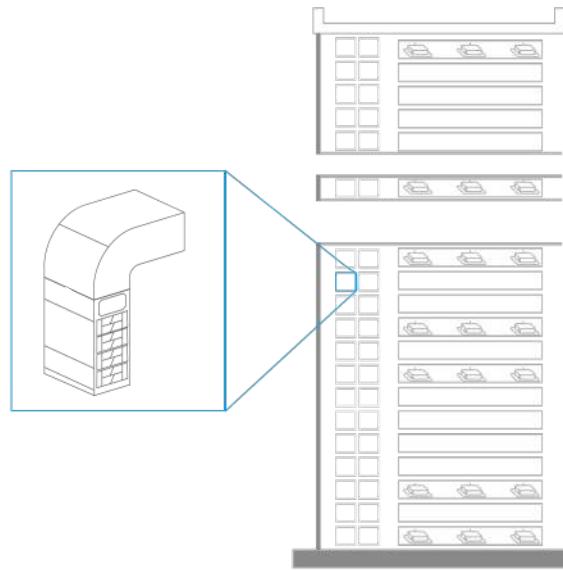

Addresses for all indoor units and combined outdoor units can be assigned automatically by the ERV8 system, further simplifying installation.

■ External Static Pressure up to 120Pa*

The static pressure of the outdoor unit can be up to 120Pa which facilitates installation of the unit on each floor of high-rise buildings or on balconies.

*External static pressure above 20Pa is available as a customization option.

■ Automatic Refrigerant Charging*

Compared to manual refrigerant charging, automatic refrigerant charging greatly simplifies the process, making installation and maintenance easier and more efficient.

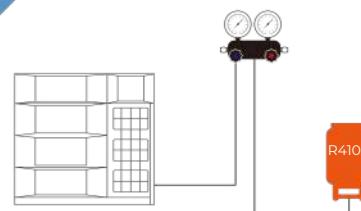

Manual refrigerant charging

- 1 •Calculate additional refrigerant quantity
- 2 •Connect refrigerant tank to the outdoor unit & start the filling process
- 3 •Observe the weight scale to check the refrigerant charge
- 4 •Close the shut-off valve manually & finish the filling process

*This function is available as a customization option.

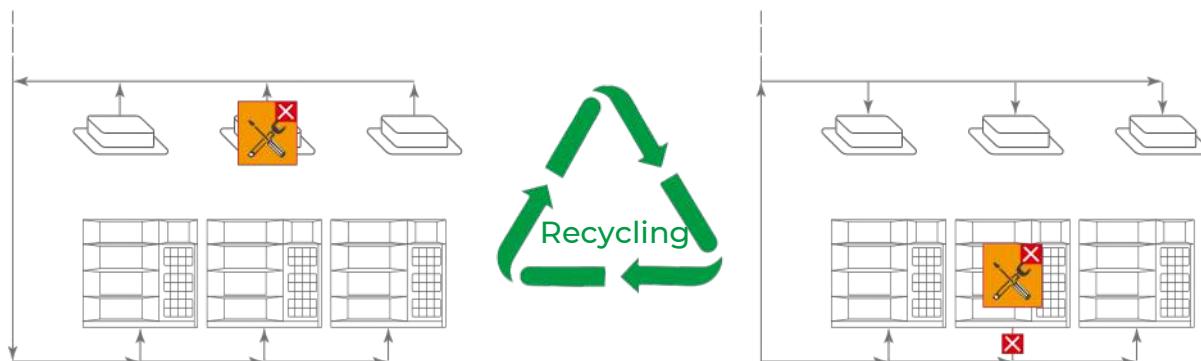

Automatic refrigerant charging

- 1 •Connect refrigerant tank to the outdoor unit & activate automatic charging function
- 2 •Close the shut-off valve automatically & finish the filling process

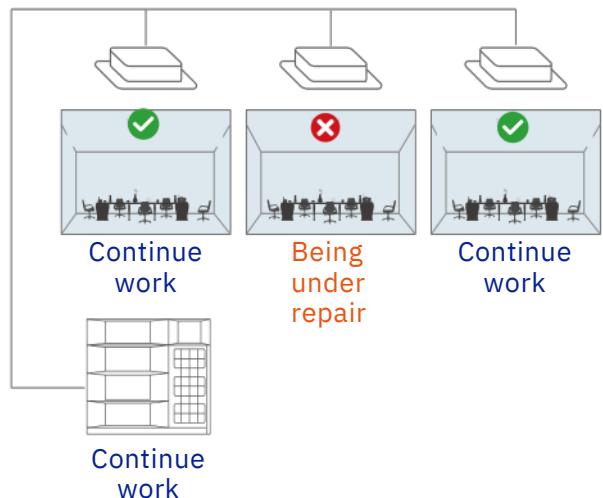

■ Automatic Refrigerant Recycling

When an indoor unit fails, the refrigerant can be recycled into the outdoor units. When part of the outdoor unit fails, the refrigerant can be recycled into the indoor units and the normal outdoor unit. Two types of refrigerant recycling make the maintenance process easier and more efficient.

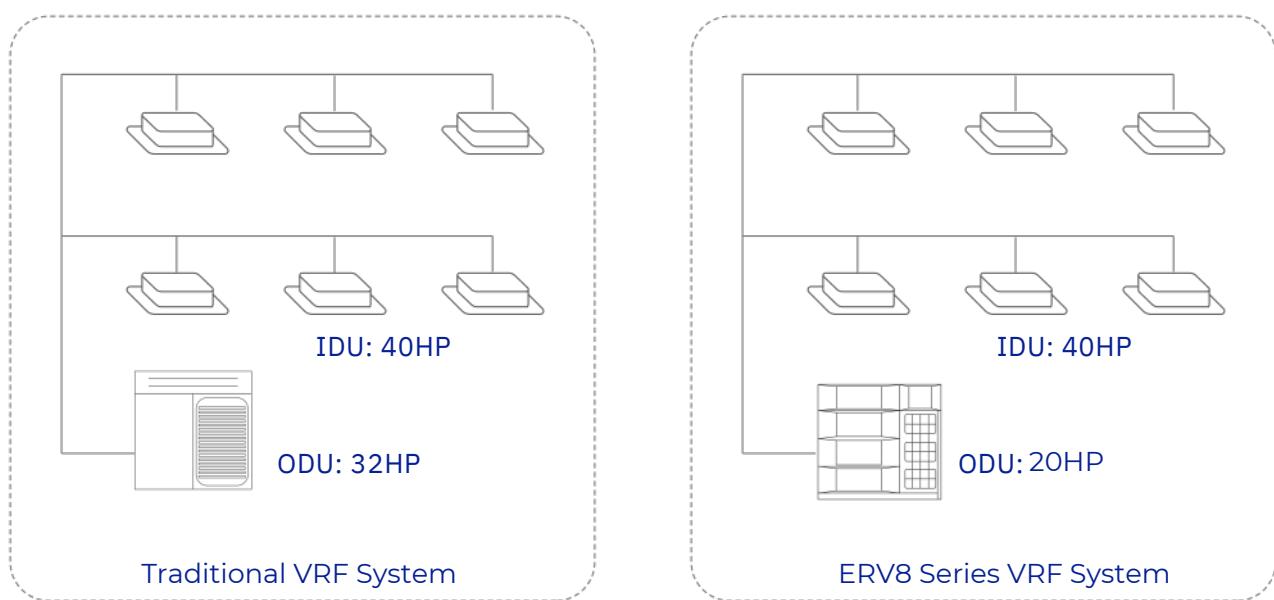

Maintenance Mode

The maintenance mode allows the shutdown of some indoor units without shutting down the whole VRF system, and it can be activated on site during the maintenance period as the remaining indoor units continue to operate.

Wide Combination Ratio*

Compared to traditional VRF with combination ratio of 50-130%, the ERV8 Series VRF can be extended to 50-200%, and the wider combination ratio allows for more flexible system configuration. The larger combination ratio can be applied to long-term part-load operation scenarios, allowing for further reduction in installation costs.

*Combination ratio over 130% is available as a customization option.

Notes:

- Indoor temperature 27°C DB, 19°C WB; outdoor temperature 35°C DB; equivalent refrigerant piping length 7.5m with zero level difference.
- Indoor temperature 20°C DB; outdoor temperature 7°C DB, 6°C WB; equivalent refrigerant piping length 7.5m with zero level difference.
- Diameters given are those for the pipe connecting the outdoor unit combination to the first indoor branch joint for systems with total equivalent liquid piping lengths of less than 90m. For systems with total equivalent liquid piping lengths of 90m or longer, please refer to the ERV8 Series Engineering Data Book for connection piping diameters.
- Sound pressure level is measured at a position 1m in front of the unit and 1.3m above the floor in a semi-anechoic chamber.

	Factory charge	kg	8.4+21×2	9.3+21×2	9.3+21×2
Pipe connections	Liquid pipe	mm	Ø25.4	Ø25.4	Ø25.4
	Gas pipe	mm	Ø50.8	Ø50.8	Ø50.8
Sound pressure level	dB(A)	70	70	70	70
Sound power level	dB(A)	98	98	98	99
Net dimensions (W×H×D)	mm	(940×1760×825)+(1880×1760×825)×2	(1340×1760×825)+(1880×1760×825)×2	(1340×1760×825)+(1880×1760×825)×2	(1340×1760×825)+(1880×1760×825)×2
Packed dimensions (W×H×D)	mm	(1005×1945×890)+(1945×1945×890)×2	(1405×1945×890)+(1945×1945×890)×2	(1405×1945×890)+(1945×1945×890)×2	(1405×1945×890)+(1945×1945×890)×2
Net weight	kg	215+408×2	295+408×2	295+408×2	315+408×2
Gross weight	kg	232+438×2	315+438×2	315+438×2	335+438×2
Ambient temp. operation range	Cooling	°C(DB)	-15 to 55	-15 to 55	-15 to 55
	Heating	°C(DB)	-30 to 30	-30 to 30	-30 to 30

Notes:

- Indoor temperature 27°C DB, 19°C WB; outdoor temperature 35°C DB; equivalent refrigerant piping length 7.5m with zero level difference.
- Indoor temperature 20°C DB; outdoor temperature 7°C DB, 6°C WB; equivalent refrigerant piping length 7.5m with zero level difference.
- Diameters given are those for the pipe connecting the outdoor unit combination to the first indoor branch joint for systems with total equivalent liquid piping lengths of less than 90m. For systems with total equivalent liquid piping lengths of 90m or longer, please refer to the ERV8 Series Engineering Data Book for connection piping diameters.
- Sound pressure level is measured at a position 1m in front of the unit and 1.3m above the floor in a semi-anechoic chamber.
